

**IN THE ABSTRACT:**

Please add the Abstract as follows:

The invention device is directed to a Bowden-type cable containing a cable (14) which is provided with proximal (14P) and distal extremities arranged in a jacket (18) having proximal (18P) and distal extremities blocked by proximal (20P) and distal arresting units. At least the first extremity (18P) of the jacket (18) is connected to the first arresting unit (20P) with the aid of a liaison unit (22) which is arranged on the first extremity (18P) of the jacket (18). In a preferred embodiment, the liaison unit is moulded on the first extremity (18P) of the jacket (18) and welded by ultrasound to the first arresting unit (20).
